

Liz Parker is a veterinarian from Australia. After many years working in veterinary private and government practice Liz started teaching veterinary students at James Cook University in North Queensland Australia. The recipient of several teaching awards Liz and her husband, an animal scientist, were offered faculty positions at The Ohio State University. While at OSU, Liz completed a PhD in epidemiology and preventive medicine. The title of her dissertation was “The prevalence and characterization of *Salmonella* contamination in commercial livestock feed mills.” While in the US, she also successfully completed the American College of Veterinary Preventive Medicine board exams and the epidemiology specialization exams. Liz has an interest in the epidemiology of the spread of antimicrobial resistance via the environment, food, and feed.
