FAO REPORT : "The unjust climate. Measuring the impacts of climate change on rural poor, women, and youth

Click here to read the report

While climate change is a global crisis, its effects on countries, people and communities are highly unequal. Those who have contributed the least to climate change bear the most burden, experiencing its severest impacts and lacking access to the resources, services and opportunities needed to adapt and survive. The impact of climate change wears a human face: rural women, youth, and people living in poverty.

Climate change not only exposes social and economic inequalities between people and communities, but it also perpetuates and exacerbates them. To address this issue, people must be at the heart of the debate. However, evidence on the distinct vulnerabilities of rural people, and how these vary based on a person's wealth status, gender, and age, are scare.

FAO has produced a groundbreaking report: "The unjust climate. Measuring the impacts of climate change on rural poor, women, and youth". It shows how climate change differently affects people, especially in rural areas. The report is based on over 109,000 households in 24 countries in 5 regions of the world, and 70 years of geo-referenced rainfall and temperature data.

United Nations Decade of Family Farming (2019-2028)

The UNDFF provides a framework for countries to develop public policies and investments to support family farming, mechanism to achieve SDGs.

It provides a new perspective on what it means to be a family farmer in a rapidly changing world and highlights, like never before, the important role that family farmers play in eradicating hunger and building our food future.

Latest from the UNDFF: Events

The VIII Global Conference of the WRF concludes with a Final Declaration that recognises the "vital" role of family farmers for a sustainable planet.
